

Incident report analysis - Example

This morning, an intern reported to the IT department that she was log in to her internal network account. Access logs indicate that he has been actively accessing records in the customer database, every she is locked out of that account. The intern indicated that she recommended in this morning asking her to go to an external website to log in internal network credentials to retrieve a message. We believe this method used by a malicious actor to gain access to our network and database. A couple of other employees have noticed that several database. A couple of other employees have noticed that several database are either missing or contain incorrect data. It appears that was customer data exposed to a malicious actor, but that some databeted or manipulated as well. Identify The incident management team audited the systems, devices, and policies involved in the attack to identify the gaps in security. The that an intern's login and password were obtained by a malicious a used to access data from our customer database. Upon initial reviews.	er account en though eived an with her s is the

used to access data from our customer database. Upon initial revie	ttacker and
	ew, it
appears that some customer data was deleted from the database.	
Protect The team has implemented new authentication policies to prevent	future
attacks: multi-factor authentication (MFA), login attempts limited t	o three
tries, and training for all employees on how to protect login creder	ntials.
Additionally, we will implement a new protective firewall configura	4: a.a. a.a.d
invest in an intrusion prevention system (IPS).	tion and
Detect To detect new unauthorized access attacks in the future, the team	tion and
firewall logging tool and an intrusion detection system (IDS) to mo	

	incoming traffic from the internet.
Respond	The team disabled the intern's network account. We provided training to interns and employees on how to protect login credentials in the future. We informed upper management of this event and they will contact our customers by mail to inform them about the data breach. Management will also need to inform law enforcement and other organizations as required by local laws.
Recover	The team will recover the deleted data by restoring the database from last night's full backup. We have informed staff that any customer information entered or changed this morning would not be recorded on the backup. So, they will need to re-enter that information into the database once it has been restored from last night's backup.
